

The seven prompts behind Three-Body Agent.

The role briefs I run in production. Named, ordered, with the one-line rationale that survives every refactor.

- 01 **Planner / triage**
Decides whether the issue is well-posed enough to plan. Allowed to push back.
- 02 **Planner / spec**
Drafts `spec.md` to a fresh branch. Acceptance criteria mandatory, code forbidden.
- 03 **Planner / clarify**
Writes clarifying questions back to the issue when the brief is insufficient. Stops.
- 04 **Implementer / brief**
Reads only `spec.md` for intent; reads the codebase for the contract. Edits, commits.
- 05 **Implementer / PR write-up**
Opens a PR mapping each change to a spec line. Draft if any ambiguity remains.
- 06 **Reviewer / diff judgement**
Reads the diff and the issue **title** only. Approve, request changes, or escalate.
- 07 **Reviewer / escape hatch**
Labels `needs: human` when the diff smells wrong or scope drifted. Loop stops.
